

# Exatouch Restaurant Network Configuration

\*All Exatouch bundles, terminals, remote printers, and PC/Laptops running back office must be connected via Ethernet cat 5e/6 cable to the FS108 switch in order to communicate.

1, First restaurant bundle purchased will contain the Exatouch database application.

2, For restaurant/bar installations, the S80 terminal is recommended for credit, and eGift processing. A dedicated wired Ethernet connection is required for communication.

3, For each remote printer serving the kitchen and or bar a dedicated wired Ethernet connection is required for communication.

4, The Exatouch Back Office application can be installed on a PC/Laptop that is connected via wired a Ethernet connection to the N300 router.

5, Remote access to the back office PC via a laptop, PC, or tablet is available with a remote control application such as TeamViewer.
